

Billing, Plans, and Seat Management

Doc ID: HC-105 | Source type: help_center_article | Title: Billing, Plans, and Seat Management | Last updated: 2026-05-28 | Version: v3.5

This article covers plans, seats, and billing for your CloudDesk workspace.

Plans overview

Plan	Best for	API rate limit
Standard	Small support teams	60 req/min
Growth	Scaling teams with automations	300 req/min
Enterprise	Large orgs needing SSO/SCIM	1,200 req/min

Adding or removing seats

Go to Settings → Billing → Seats → Add Seats. New seats are prorated for the remainder of your current billing cycle. Deactivated agent accounts should be fully removed (not just deactivated) to stop being counted toward your seat total.

Changing plans

Upgrades take effect immediately; downgrades take effect at your next renewal date to avoid losing access to features mid-cycle.

Annual billing

Switching from monthly to annual billing gives a 15% discount, effective at your next billing cycle.

Data retention

Resolved tickets are retained indefinitely by default. Configure a custom retention window under Settings → Data Retention if required for your compliance needs.
