

Release Notes — v3.4.0

Doc ID: RN-3.4.0 | Source type: release_notes | Title: Release Notes — v3.4.0 | Release date: 2026-04-20 | Version: v3.4.0

New features

- Bulk ticket update endpoint (PATCH multiple tickets in one call), emitting a single tickets.bulk_updated webhook event.
- Admin infra dashboard: per-workspace throttle controls for temporary rate-limit exceptions during large migrations.

Improvements

- Database read replica added for the ticket search index, reducing p95 search latency by ~35%.
- Rate-limit audit tooling (admin/infra/rate-limit-audit) added to help diagnose mismatched 429 reports.

Bug fixes

- Fixed an issue where bulk webhook payloads over 512 KB were silently dropped instead of being paginated.
- Fixed incorrect seat counts on invoices for deactivated-but-not-removed agent accounts.
