

Release Notes — v3.5.0

Doc ID: RN-3.5.0 | Source type: release_notes | Title: Release Notes — v3.5.0 | Release date: 2026-05-25 | Version: v3.5.0

New features

- Annual billing option added with a 15% discount versus monthly billing.
- New REST endpoints for Teams routing rules (GET /teams/{id}).
- Itemized invoice export (Settings → Billing → Invoices → Export).

Improvements

- Cursor pagination limit raised from 50 to 100 for all list endpoints.
- Error responses now include a request_id field in every error envelope for easier support escalation.

Bug fixes

- Fixed a bug where older SDK versions (pre-2.3) stripped the request_id from error responses.
- Fixed downgrade timing so plan downgrades now correctly apply at next renewal instead of immediately.

Known issues

- Rate limiter may key on IP address instead of API key for requests behind certain shared NAT configurations — fix scheduled for v3.6.0.
